

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction))

(Class – XI)

## Exercise 4.1

### Question 1:

Prove the following by using the principle of mathematical induction for all  $n \in \mathbb{N}$ :

$$1 + 3 + 3^2 + \dots + 3^{n-1} = \frac{(3^n - 1)}{2}$$

### Answer 1:

Let the given statement be  $P(n)$ , i.e.,

$$P(n): 1 + 3 + 3^2 + \dots + 3^{n-1} = \frac{(3^n - 1)}{2}$$

For  $n = 1$ , we have

$$P(1) := \frac{(3^1 - 1)}{2} = \frac{3 - 1}{2} = \frac{2}{2} = 1, \text{ which is true.}$$

Let  $P(k)$  be true for some positive integer  $k$ , i.e.,

$$1 + 3 + 3^2 + \dots + 3^{k-1} = \frac{(3^k - 1)}{2} \quad \dots(i)$$

We shall now prove that  $P(k + 1)$  is true.

Consider

$$\begin{aligned} & 1 + 3 + 3^2 + \dots + 3^{k-1} + 3^{(k+1) - 1} \\ &= (1 + 3 + 3^2 + \dots + 3^{k-1}) + 3^k \end{aligned}$$

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction))

(Class – XI)

$$\begin{aligned} &= \frac{(3^k - 1)}{2} + 3^k && \text{[Using (i)]} \\ &= \frac{(3^k - 1) + 2 \cdot 3^k}{2} \\ &= \frac{(1 + 2)3^k - 1}{2} \\ &= \frac{3 \cdot 3^k - 1}{2} \\ &= \frac{3^{k+1} - 1}{2} \end{aligned}$$

Thus,  $P(k + 1)$  is true whenever  $P(k)$  is true.

Hence, by the principle of mathematical induction, statement  $P(n)$  is true for all natural numbers i.e.,  $\mathbb{N}$ .

## Question 2:

Prove the following by using the principle of mathematical induction for all  $n \in \mathbb{N}$ :

$$1^3 + 2^3 + 3^3 + \dots + n^3 = \left( \frac{n(n+1)}{2} \right)^2$$

## Answer 2:

Let the given statement be  $P(n)$ , i.e.,

$$P(n): 1^3 + 2^3 + 3^3 + \dots + n^3 = \left( \frac{n(n+1)}{2} \right)^2$$

For  $n = 1$ , we have

$$P(1): 1^3 = 1 = \left( \frac{1(1+1)}{2} \right)^2 = \left( \frac{1 \cdot 2}{2} \right)^2 = 1^2 = 1, \text{ which is true.}$$

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction))

(Class – XI)

Let  $P(k)$  be true for some positive integer  $k$ , i.e.,

$$1^3 + 2^3 + 3^3 + \dots + k^3 = \left( \frac{k(k+1)}{2} \right)^2 \quad \dots (i)$$

We shall now prove that  $P(k + 1)$  is true.

Consider

$$\begin{aligned} & 1^3 + 2^3 + 3^3 + \dots + k^3 + (k + 1)^3 \\ &= (1^3 + 2^3 + 3^3 + \dots + k^3) + (k + 1)^3 \\ &= \left( \frac{k(k+1)}{2} \right)^2 + (k+1)^3 \quad \quad \quad [\text{Using (i)}] \\ &= \frac{k^2(k+1)^2}{4} + (k+1)^3 \\ &= \frac{k^2(k+1)^2 + 4(k+1)^3}{4} \\ &= \frac{(k+1)^2 \{k^2 + 4(k+1)\}}{4} \\ &= \frac{(k+1)^2 \{k^2 + 4k + 4\}}{4} \\ &= \frac{(k+1)^2 (k+2)^2}{4} \\ &= \frac{(k+1)^2 (k+1+1)^2}{4} \\ &= \left( \frac{(k+1)(k+1+1)}{2} \right)^2 \end{aligned}$$

Thus,  $P(k + 1)$  is true whenever  $P(k)$  is true.

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction)

(Class – XI)

Hence, by the principle of mathematical induction, statement  $P(n)$  is true for all natural numbers i.e.,  $\mathbb{N}$ .

### Question 3:

Prove the following by using the principle of mathematical induction for all  $n \in \mathbb{N}$ :

$$1 + \frac{1}{(1+2)} + \frac{1}{(1+2+3)} + \dots + \frac{1}{(1+2+3+\dots+n)} = \frac{2n}{(n+1)}$$

### Answer 3:

Let the given statement be  $P(n)$ , i.e.,

$$P(n): 1 + \frac{1}{1+2} + \frac{1}{1+2+3} + \dots + \frac{1}{1+2+3+\dots+n} = \frac{2n}{n+1}$$

For  $n = 1$ , we have

$$P(1): 1 = \frac{2 \cdot 1}{1+1} = \frac{2}{2} = 1, \text{ which is true.}$$

Let  $P(k)$  be true for some positive integer  $k$ , i.e.,

$$1 + \frac{1}{1+2} + \dots + \frac{1}{1+2+3} + \dots + \frac{1}{1+2+3+\dots+k} = \frac{2k}{k+1} \quad \dots (i)$$

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction))

(Class – XI)

We shall now prove that  $P(k + 1)$  is true.

Consider

$$\begin{aligned} & 1 + \frac{1}{1+2} + \frac{1}{1+2+3} + \dots + \frac{1}{1+2+3+\dots+k} + \frac{1}{1+2+3+\dots+k+(k+1)} \\ &= \left( 1 + \frac{1}{1+2} + \frac{1}{1+2+3} + \dots + \frac{1}{1+2+3+\dots+k} \right) + \frac{1}{1+2+3+\dots+k+(k+1)} \\ &= \frac{2k}{k+1} + \frac{1}{1+2+3+\dots+k+(k+1)} \quad \text{[Using (i)]} \\ &= \frac{2k}{k+1} + \frac{1}{\left( \frac{(k+1)(k+1+1)}{2} \right)} \quad \left[ 1+2+3+\dots+n = \frac{n(n+1)}{2} \right] \\ &= \frac{2k}{(k+1)} + \frac{2}{(k+1)(k+2)} \\ &= \frac{2}{(k+1)} \left( k + \frac{1}{k+2} \right) \\ &= \frac{2}{(k+1)} \left( \frac{k^2 + 2k + 1}{k+2} \right) \\ &= \frac{2}{(k+1)} \left[ \frac{(k+1)^2}{k+2} \right] \\ &= \frac{2(k+1)}{(k+2)} \end{aligned}$$

Thus,  $P(k + 1)$  is true whenever  $P(k)$  is true.

Hence, by the principle of mathematical induction, statement  $P(n)$  is true for all natural numbers i.e.,  $\mathbb{N}$ .

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction))

(Class – XI)

## Question 4:

Prove the following by using the principle of mathematical induction for all  $n \in N$ :

$$1.2.3 + 2.3.4 + \dots + n(n + 1) (n + 2) = \frac{n(n+1)(n+2)(n+3)}{4}$$

## Answer 4:

Let the given statement be  $P(n)$ , i.e.,

$$P(n): 1.2.3 + 2.3.4 + \dots + n(n + 1) (n + 2) = \frac{n(n+1)(n+2)(n+3)}{4}$$

For  $n = 1$ , we have

$$P(1): 1.2.3 = 6 = \frac{1(1+1)(1+2)(1+3)}{4} = \frac{1.2.3.4}{4} = 6, \text{ which is true.}$$

Let  $P(k)$  be true for some positive integer  $k$ , i.e.,

$$1.2.3 + 2.3.4 + \dots + k(k + 1) (k + 2) = \frac{k(k+1)(k+2)(k+3)}{4} \quad \dots (i)$$

We shall now prove that  $P(k + 1)$  is true.

Consider

$$\begin{aligned} & 1.2.3 + 2.3.4 + \dots + k(k + 1) (k + 2) + (k + 1) (k + 2) (k + 3) \\ &= \{1.2.3 + 2.3.4 + \dots + k(k + 1) (k + 2)\} + (k + 1) (k + 2) (k + 3) \end{aligned}$$

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction)

(Class – XI)

$$\begin{aligned} &= \frac{k(k+1)(k+2)(k+3)}{4} + (k+1)(k+2)(k+3) \quad [\text{Using (i)}] \\ &= (k+1)(k+2)(k+3) \left( \frac{k}{4} + 1 \right) \\ &= \frac{(k+1)(k+2)(k+3)(k+4)}{4} \\ &= \frac{(k+1)(k+1+1)(k+1+2)(k+1+3)}{4} \end{aligned}$$

Thus,  $P(k + 1)$  is true whenever  $P(k)$  is true.

Hence, by the principle of mathematical induction, statement  $P(n)$  is true for all natural numbers i.e.,  $\mathbb{N}$ .

## Question 5:

Prove the following by using the principle of mathematical induction for all  $n \in \mathbb{N}$ :

$$1.3 + 2.3^2 + 3.3^3 + \dots + n.3^n = \frac{(2n-1)3^{n+1} + 3}{4}$$

## Answer 5:

Let the given statement be  $P(n)$ , i.e.,

$$P(n) : 1.3 + 2.3^2 + 3.3^3 + \dots + n.3^n = \frac{(2n-1)3^{n+1} + 3}{4}$$

For  $n = 1$ , we have

$$P(1): 1.3 = 3 = \frac{(2.1-1)3^{1+1} + 3}{4} = \frac{3^2 + 3}{4} = \frac{12}{4} = 3, \text{ which is true.}$$

Let  $P(k)$  be true for some positive integer  $k$ , i.e.,

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction)

(Class – XI)

$$1.3 + 2.3^2 + 3.3^3 + \dots + k.3^k = \frac{(2k-1)3^{k+1} + 3}{4} \quad \dots \text{ (i)}$$

We shall now prove that  $P(k + 1)$  is true.

Consider

$$\begin{aligned} & 1.3 + 2.3^2 + 3.3^3 + \dots + k.3^k + (k + 1).3^{k+1} \\ &= (1.3 + 2.3^2 + 3.3^3 + \dots + k.3^k) + (k + 1).3^{k+1} \\ &= \frac{(2k-1)3^{k+1} + 3}{4} + (k+1)3^{k+1} \quad \text{[Using (i)]} \\ &= \frac{(2k-1)3^{k+1} + 3 + 4(k+1)3^{k+1}}{4} \\ &= \frac{3^{k+1} \{2k-1+4(k+1)\} + 3}{4} \\ &= \frac{3^{k+1} \{6k+3\} + 3}{4} \\ &= \frac{3^{k+1} . 3 \{2k+1\} + 3}{4} \\ &= \frac{3^{(k+1)+1} \{2k+1\} + 3}{4} \\ &= \frac{\{2(k+1)-1\} 3^{(k+1)+1} + 3}{4} \end{aligned}$$

Thus,  $P(k + 1)$  is true whenever  $P(k)$  is true.

Hence, by the principle of mathematical induction, statement  $P(n)$  is true for all natural numbers i.e.,  $N$ .

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction)

(Class – XI)

## Question 6:

Prove the following by using the principle of mathematical induction for all  $n \in \mathbb{N}$ :

$$1.2 + 2.3 + 3.4 + \dots + n.(n+1) = \left[ \frac{n(n+1)(n+2)}{3} \right]$$

## Answer 6:

Let the given statement be  $P(n)$ , i.e.,

$$P(n): 1.2 + 2.3 + 3.4 + \dots + n.(n+1) = \left[ \frac{n(n+1)(n+2)}{3} \right]$$

For  $n = 1$ , we have

$$P(1): 1.2 = 2 = \frac{1(1+1)(1+2)}{3} = \frac{1.2.3}{3} = 2, \text{ which is true.}$$

Let  $P(k)$  be true for some positive integer  $k$ , i.e.,

$$1.2 + 2.3 + 3.4 + \dots + k.(k+1) = \left[ \frac{k(k+1)(k+2)}{3} \right] \quad \dots (i)$$

We shall now prove that  $P(k + 1)$  is true.

Consider

$$1.2 + 2.3 + 3.4 + \dots + k.(k+1) + (k+1).(k+2)$$

$$= [1.2 + 2.3 + 3.4 + \dots + k.(k+1)] + (k+1).(k+2)$$

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction)

(Class – XI)

$$\begin{aligned} &= \frac{k(k+1)(k+2)}{3} + (k+1)(k+2) && \text{[Using (i)]} \\ &= (k+1)(k+2)\left(\frac{k}{3}+1\right) \\ &= \frac{(k+1)(k+2)(k+3)}{3} \\ &= \frac{(k+1)(k+1+1)(k+1+2)}{3} \end{aligned}$$

Thus,  $P(k + 1)$  is true whenever  $P(k)$  is true.

Hence, by the principle of mathematical induction, statement  $P(n)$  is true for all natural numbers i.e.,  $\mathbb{N}$ .

## Question 7:

Prove the following by using the principle of mathematical induction for all  $n \in \mathbb{N}$ :

$$1.3 + 3.5 + 5.7 + \dots + (2n-1)(2n+1) = \frac{n(4n^2 + 6n - 1)}{3}$$

## Answer 7:

Let the given statement be  $P(n)$ , i.e.,

$$P(n): 1.3 + 3.5 + 5.7 + \dots + (2n-1)(2n+1) = \frac{n(4n^2 + 6n - 1)}{3}$$

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction))

(Class – XI)

For  $n = 1$ , we have

$$P(1): 1.3 = 3 = \frac{1(4.1^2 + 6.1 - 1)}{3} = \frac{4 + 6 - 1}{3} = \frac{9}{3} = 3, \text{ which is true.}$$

Let  $P(k)$  be true for some positive integer  $k$ , i.e.,

$$1.3 + 3.5 + 5.7 + \dots + (2k - 1)(2k + 1) = \frac{k(4k^2 + 6k - 1)}{3} \quad \dots (i)$$

We shall now prove that  $P(k + 1)$  is true.

Consider

$$(1.3 + 3.5 + 5.7 + \dots + (2k - 1)(2k + 1) + \{2(k + 1) - 1\}\{2(k + 1) + 1\})$$

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction))

(Class – XI)

$$\begin{aligned} &= \frac{k(4k^2 + 6k - 1)}{3} + (2k + 2 - 1)(2k + 2 + 1) && \text{[Using (i)]} \\ &= \frac{k(4k^2 + 6k - 1)}{3} + (2k + 1)(2k + 3) \\ &= \frac{k(4k^2 + 6k - 1)}{3} + (4k^2 + 8k + 3) \\ &= \frac{k(4k^2 + 6k - 1) + 3(4k^2 + 8k + 3)}{3} \\ &= \frac{4k^3 + 6k^2 - k + 12k^2 + 24k + 9}{3} \\ &= \frac{4k^3 + 18k^2 + 23k + 9}{3} \\ &= \frac{4k^3 + 14k^2 + 9k + 4k^2 + 14k + 9}{3} \\ &= \frac{k(4k^2 + 14k + 9) + 1(4k^2 + 14k + 9)}{3} \\ &= \frac{(k + 1)(4k^2 + 14k + 9)}{3} \\ &= \frac{(k + 1)\{4k^2 + 8k + 4 + 6k + 6 - 1\}}{3} \\ &= \frac{(k + 1)\{4(k^2 + 2k + 1) + 6(k + 1) - 1\}}{3} \\ &= \frac{(k + 1)\{4(k + 1)^2 + 6(k + 1) - 1\}}{3} \end{aligned}$$

Thus,  $P(k + 1)$  is true whenever  $P(k)$  is true.

Hence, by the principle of mathematical induction, statement  $P(n)$  is true for all natural numbers i.e.,  $N$ .

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction))

(Class – XI)

## Question 8:

Prove the following by using the principle of mathematical induction for all  $n \in \mathbb{N}$ :  $1.2 +$

$$2.2^2 + 3.2^2 + \dots + n.2^n = (n - 1) 2^{n+1} + 2$$

## Answer 8:

Let the given statement be  $P(n)$ , i.e.,

$$P(n): 1.2 + 2.2^2 + 3.2^2 + \dots + n.2^n = (n - 1) 2^{n+1} + 2$$

For  $n = 1$ , we have

$$P(1): 1.2 = 2 = (1 - 1) 2^{1+1} + 2 = 0 + 2 = 2, \text{ which is true.}$$

Let  $P(k)$  be true for some positive integer  $k$ , i.e.,

$$1.2 + 2.2^2 + 3.2^2 + \dots + k.2^k = (k - 1) 2^{k+1} + 2 \dots \text{ (i)}$$

We shall now prove that  $P(k + 1)$  is true.

Consider

$$\begin{aligned} & \{1.2 + 2.2^2 + 3.2^3 + \dots + k.2^k\} + (k+1).2^{k+1} \\ &= (k-1)2^{k+1} + 2 + (k+1)2^{k+1} \\ &= 2^{k+1} \{(k-1) + (k+1)\} + 2 \\ &= 2^{k+1}.2k + 2 \\ &= k.2^{(k+1)+1} + 2 \\ &= \{(k+1) - 1\} 2^{(k+1)+1} + 2 \end{aligned}$$

Thus,  $P(k + 1)$  is true whenever  $P(k)$  is true.

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction))

(Class – XI)

Hence, by the principle of mathematical induction, statement  $P(n)$  is true for all natural numbers i.e.,  $N$ .

## Question 9:

Prove the following by using the principle of mathematical induction for all  $n \in N$ :

$$\frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \dots + \frac{1}{2^n} = 1 - \frac{1}{2^n}$$

## Answer 9:

Let the given statement be  $P(n)$ , i.e.,

$$P(n): \quad \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \dots + \frac{1}{2^n} = 1 - \frac{1}{2^n}$$

For  $n = 1$ , we have

$$P(1): \quad \frac{1}{2} = 1 - \frac{1}{2^1} = \frac{1}{2}, \text{ which is true.}$$

Let  $P(k)$  be true for some positive integer  $k$ , i.e.,

$$\frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \dots + \frac{1}{2^k} = 1 - \frac{1}{2^k} \quad \dots \text{ (i)}$$

We shall now prove that  $P(k + 1)$  is true.

Consider

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction)

(Class – XI)

$$\begin{aligned} & \left( \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \dots + \frac{1}{2^k} \right) + \frac{1}{2^{k+1}} \\ &= \left( 1 - \frac{1}{2^k} \right) + \frac{1}{2^{k+1}} \quad \text{[Using (i)]} \\ &= 1 - \frac{1}{2^k} + \frac{1}{2 \cdot 2^k} \\ &= 1 - \frac{1}{2^k} \left( 1 - \frac{1}{2} \right) \\ &= 1 - \frac{1}{2^k} \left( \frac{1}{2} \right) \\ &= 1 - \frac{1}{2^{k+1}} \end{aligned}$$

Thus,  $P(k + 1)$  is true whenever  $P(k)$  is true.

Hence, by the principle of mathematical induction, statement  $P(n)$  is true for all natural numbers i.e.,  $N$ .

## Question 10:

Prove the following by using the principle of mathematical induction for all  $n \in N$ :

$$\frac{1}{2.5} + \frac{1}{5.8} + \frac{1}{8.11} + \dots + \frac{1}{(3n-1)(3n+2)} = \frac{n}{(6n+4)}$$

## Answer 10:

Let the given statement be  $P(n)$ , i.e.,

$$P(n): \frac{1}{2.5} + \frac{1}{5.8} + \frac{1}{8.11} + \dots + \frac{1}{(3n-1)(3n+2)} = \frac{n}{(6n+4)}$$

For  $n = 1$ , we have

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction))

(Class – XI)

$$P(1) = \frac{1}{2.5} = \frac{1}{10} = \frac{1}{6.1+4} = \frac{1}{10}, \text{ which is true.}$$

Let  $P(k)$  be true for some positive integer  $k$ , i.e.,

$$\frac{1}{2.5} + \frac{1}{5.8} + \frac{1}{8.11} + \dots + \frac{1}{(3k-1)(3k+2)} = \frac{k}{6k+4} \quad \dots (i)$$

We shall now prove that  $P(k+1)$  is true.

Consider

$$\begin{aligned} & \frac{1}{2.5} + \frac{1}{5.8} + \frac{1}{8.11} + \dots + \frac{1}{(3k-1)(3k+2)} + \frac{1}{\{3(k+1)-1\}\{3(k+1)+2\}} \\ &= \frac{k}{6k+4} + \frac{1}{(3k+3-1)(3k+3+2)} \quad \text{[Using (i)]} \\ &= \frac{k}{6k+4} + \frac{1}{(3k+2)(3k+5)} \\ &= \frac{k}{2(3k+2)} + \frac{1}{(3k+2)(3k+5)} \\ &= \frac{1}{(3k+2)} \left( \frac{k}{2} + \frac{1}{3k+5} \right) \\ &= \frac{1}{(3k+2)} \left( \frac{k(3k+5)+2}{2(3k+5)} \right) \\ &= \frac{1}{(3k+2)} \left( \frac{3k^2+5k+2}{2(3k+5)} \right) \\ &= \frac{1}{(3k+2)} \left( \frac{(3k+2)(k+1)}{2(3k+5)} \right) \\ &= \frac{(k+1)}{6k+10} \\ &= \frac{(k+1)}{6(k+1)+4} \end{aligned}$$

# Mathematics

([www.tiwariacademy.com](http://www.tiwariacademy.com) : A step towards free education)

(Chapter – 4) (Principle of Mathematical Induction))

(Class – XI)

Thus,  $P(k + 1)$  is true whenever  $P(k)$  is true.

Hence, by the principle of mathematical induction, statement  $P(n)$  is true for all natural numbers i.e.,  $\mathbb{N}$ .
