(Class – IX)

## Exercise 7.3

### Question 3:

CDE is an equilateral triangle formed on a side CD of a square ABCD. Show that  $\triangle ADE \cong \triangle BCE$ .

### Answer 3:

**Given:** CDE is an equilateral triangle and ABCD is square.

**To Prove:**  $\triangle ADE \cong \triangle BCE$ .

**Proof:** ABCD is square

[∵ Given]

$$\Rightarrow \angle ADC = \angle BCD = 90^\circ$$

... (i) [∵ Angles of square]

CDE is an equilateral triangle

$$\Rightarrow \angle EDC = \angle ECD = 60^\circ$$

... (ii) [∵ Angles of equilateral triangle]

Adding equations (i) and (ii), we get

$$\angle ADC + \angle EDC = \angle BCD + \angle ECD = 90^\circ + 60^\circ$$

# Mathematics

([www.tiwariacademy.net](http://www.tiwariacademy.net))

*(Chapter – 7) (Triangles)(Exemplar Problems)*

*(Class – IX)*

$$\Rightarrow \angle ADE = \angle BCE = 150^\circ$$

Now, in  $\triangle ADE$  &  $\triangle BCE$

$$AD = BC$$

[ $\because$  Opposite sides of a square]

$$\angle ADE = \angle BCE$$

[ $\because$  Proved above]

$$ED = EC$$

[ $\because$  Sides of an equilateral triangle]

$$\triangle ADE \cong \triangle BCE$$

[ $\because$  SAS rule]

Hence Proved.
