*(Chapter – 4) (Linear Equations in two Variables)(Exemplar Problems)*  
**(Class – IX)**

## Exercise 4.1

Write the correct answer in each of the following:

### Question 9:

The equation of  $x$  – axis is of the form

- (A)  $x = 0$             (B)  $y = 0$             (C)  $x + y = 0$             (D)  $x = y$

### Answer 9:

- (B)  $y = 0$

### Solution:

Because all the points at the  $x$  – axis, the value of  $y$  – coordinate is zero.
