## Exercise 7.1

### Question 1:

Which of the following numbers are not perfect cubes:

- (i) 216 (ii) 128  
(iii) 1000 (iv) 100  
(v) 46656

### Answer 1:

- (i) 216  
Prime factors of 216 =  $2 \times 2 \times 2 \times 3 \times 3 \times 3$   
Here all factors are in groups of 3's (in triplets)  
Therefore, 216 is a perfect cube number.

2	216
2	108
2	54
3	27
3	9
3	3
	1

- (ii) 128  
Prime factors of 128 =  $2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2$   
Here one factor 2 does not appear in a 3's group.  
Therefore, 128 is not a perfect cube.

2	128
2	64
2	32
2	16
2	8
2	4
2	2
	1

- (iii) 1000  
Prime factors of 1000 =  $2 \times 2 \times 2 \times 3 \times 3 \times 3$   
Here all factors appear in 3's group.  
Therefore, 1000 is a perfect cube.

2	1000
2	500
2	250
5	125
5	25
5	5
	1

- (iv) 100  
Prime factors of 100 =  $2 \times 2 \times 5 \times 5$   
Here all factors do not appear in 3's group.  
Therefore, 100 is not a perfect cube.

2	100
2	50
5	25
5	5
	1

- (v) 46656  
Prime factors of 46656 =  $2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 3 \times 3 \times 3 \times 3 \times 3 \times 3$   
Here all factors appear in 3's group.  
Therefore, 46656 is a perfect cube.

### Question 2:

Find the smallest number by which each of the following numbers must be multiplied to obtain a perfect cube:

- (i) 243 (ii) 256  
(iii) 72 (iv) 675  
(v) 100

# Mathematics

(www.tiwariacademy.com)  
(Chapter – 7) (Cubes and Cube Roots)  
(Class – VIII)

## Answer 2:

(i) 243

Prime factors of 243 =  $3 \times 3 \times 3 \times 3 \times 3$

Here 3 does not appear in 3's group.

Therefore, 243 must be multiplied by 3 to make it a perfect cube.

(ii) 256

Prime factors of 256 =  $2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2$

Here one factor 2 is required to make a 3's group.

Therefore, 256 must be multiplied by 2 to make it a perfect cube.

(iii) 72

Prime factors of 72 =  $2 \times 2 \times 2 \times 3 \times 3$

Here 3 does not appear in 3's group.

Therefore, 72 must be multiplied by 3 to make it a perfect cube.

(iv) 675

Prime factors of 675 =  $3 \times 3 \times 3 \times 5 \times 5$

Here factor 5 does not appear in 3's group.

Therefore 675 must be multiplied by 3 to make it a perfect cube.

(v) 100

Prime factors of 100 =  $2 \times 2 \times 5 \times 5$

Here factor 2 and 5 both do not appear in 3's group.

Therefore 100 must be multiplied by  $2 \times 5 = 10$  to make it a perfect cube.

## Question 3:

Find the smallest number by which each of the following numbers must be divided to obtain a perfect cube:

(i) 81

(ii) 128

(iii) 135

(iv) 192

(v) 704

## Answer 3:

(i) 81

Prime factors of 81 =  $3 \times 3 \times 3 \times 3$

Here one factor 3 is not grouped in triplets.

Therefore 81 must be divided by 3 to make it a perfect cube.

3	81
3	27
3	9
3	3
	1

# Mathematics

(www.tiwariacademy.com)  
(Chapter – 7) (Cubes and Cube Roots)  
(Class – VIII)

(ii) 128

Prime factors of 128 =  $2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2$

Here one factor 2 does not appear in a 3's group.

Therefore, 128 must be divided by 2 to make it a perfect cube.

2	128
2	64
2	32
2	16
2	8
2	4
2	2
	1

(iii) 135

Prime factors of 135 =  $3 \times 3 \times 3 \times 5$

Here one factor 5 does not appear in a triplet.

Therefore, 135 must be divided by 5 to make it a perfect cube.

3	135
3	45
3	15
5	5
	1

(iv) 192

Prime factors of 192 =  $2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 3$

Here one factor 3 does not appear in a triplet.

Therefore, 192 must be divided by 3 to make it a perfect cube.

2	192
2	96
2	48
2	24
2	12
2	6
3	3
	1

(v) 704

Prime factors of 704 =  $2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 11$

Here one factor 11 does not appear in a triplet.

Therefore, 704 must be divided by 11 to make it a perfect cube.

2	704
2	352
2	176
2	88
2	44
2	22
2	11
	1

## Question 4:

Parikshit makes a cuboid of plasticine of sides 5 cm, 2 cm, 5 cm. How many such cuboids will he need to form a cube?

## Answer 4:

Given numbers =  $5 \times 2 \times 5$

Since, Factors of 5 and 2 both are not in group of three.

Therefore, the number must be multiplied by  $2 \times 2 \times 5 = 20$  to make it a perfect cube.

Hence he needs 20 cuboids.
